The project idea: The idea is to teach users five new things about keyboard shortcuts. A lot of people do not know about keyboard shortcuts when using computers and never spend time to memorize these shortcuts. However, keyboard shortcuts are quite powerful and are much quicker than normal operations (e.g. "Ctrl+C" is much quicker and more convenient than "right click the mouse and select "copy" on the popup menu"). Knowing some most common keyboard shortcuts will greatly enhance the users' efficiency.

The target people: People who do not know about keyboard shortcuts.

The five things the app teaches: The app teaches five most common keyboard shortcuts: "Copy: Ctrl+ C", "Paste: Ctrl+ V", "Cut: Ctrl+ X", "Shift between programs: Alt + Tab", "Search for a string: Ctrl + F".
